                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
This foun sequence codes for cpk (see W38757), a Drosophila CC polypeptide that belongs to a novel class of phosphatidyl inositol CC 3-kinases that contain a C2 domain, are capable of phosphotylating CC a D3 hydroxyl of an inositol ring in phosphatidyl inositol and CC phosphatidyl inositol 4-phosphate, but not in phosphatidyl inositol CC 4,5-bisphosphate, and which are involved in cell signalling cascades that control e.g. cell cycle progression and intracellular protein CC sorting. Short fragments of cpk cDNA were obtained from a Drosophila cDNA library by PCR (see T80195-96). These short CC fragments were used to screen the cDNA library to obtain larger CC fragments, and missing 5' ends were obtained by RACE. A CC recombinant host cell, transfected with a vector comprising a cpk CC nucleic acid is claimed. Novel phosphatidyl inositol 3-kinases CC can be used to screen for agonists/antagonists of activity and CC in a claimed method of treating a disorder caused by dysregulation CC of a growth factor activation signalling cascade. Antagonists of activity and classer restenosis following treatment of proliferative CC classed Ras activation allowing treatment of proliferative disorders such as atherosclerosis, inflammatory joint disease, Sequence 6831 BP; 1829 A; 1665 C; 1669 G; 1648 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             22-JUN-1998 (first entry)
Phosphatidyl inositol 3-kinase cdk cDNA.
Phosphatidyl inositol 3-kinase; signal transduction; cell cycle; antagonist; inflammatory joint disease; cell proliferation; cance psoriasis; restenosis; atherosclerosis; therapy; diagnosis; cpk;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   T80200;
                                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated phospatidyl inositol-3 kinase polypeptide - used develop products for diagnosis and therapy, particularly for proliferative disorders, e.g. inflammatory joint diseases, or Example 1; Fig 9; 77pp; English.

                                                                                                                                                                                                                                                                                                                                                                       activity, useful for controlling cell proliferation
Disclosure; Fig 20; 146pp; English.
Southern blot analysis was performed using a bovine cDNA probe contg.
a fragment of a PI3-kinase-encoding sequence and human cDNA isolated
from a cDNA library constructed from mRNA isolated from the human
cell line KGla. Positive clones were sequenced to give the human
pris kinase pillo sequence shown. This sequence has 95 percent
homology with the bovine sequence. The domain encoding residues 19-
100 of human pillo is sufficient to encode the kinase which will
associate with the p85 kinase subunit. The gene may be used to
provide a protein with Pis kinase activity, and is useful for
screening for (ant)agonists of Pis kinase activity which could be
                                                                                                                                                                                                                                                                                                            useful for stimulation or inhibition of cell proliferation and her prophylaxis or therapy. Platelet or neutrophil activity or blood glucose levels can be controlled using the kinase. See also Q51155-6, Q59012-23 and Q57523.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              activity, useful for controlling cell proliferation

bisclosure; Fig 21; 146pp; English.

Southern blot analysis was performed using a bovine cDNA probe contg.

a fragment of a PI3-kinase-encoding sequence and human cDNA isolated

from a cDNA library constructed from mRNA isolated from the human

cell line KGla. Positive clones were sequenced to give the human

cell line KGla. Positive clones were sequenced to give the human

riskinase pillo sequence shown. This sequence has 95 percent

chomology with the bovine sequence. The domain encoding residues 19-

100 of human pillo is sufficient to encode the kinase which will

associate with the p85 kinase subunit. The gene may be used to

provide a protein with pI3 kinase activity, and is useful for

screening for (ant)agonists of PI3 kinase activity which could be

useful for stimulation or inhibition of cell proliferation and hence

prophylaxis or therapy. Platelet or neutrophil activity or blood

glucose levels can be controlled using the kinase.

E-mail: jes@sanger.ac.uk or rw@nematode.wustl.edu On Dec 5, 1998 this sequence version replaced gi:3954762.

IMPORTANT: This sequence is unfinished and does not necessarily represent the correct sequence. Work on the sequence is in progress and the release of this data is based on the understanding that the sequence may change as work continues. The sequence may be contaminated with foreign sequence from E.coli, yeast, vector, phage etc. Order of segments is not known; 800 n's separate

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          overlapping sections once, or longer because we arrange for a small overlap between neighbouring submissions.

This sequence is the entire insert of clone B0334. The true right end of clone W02B12 is at 4181 in this sequence. The start of this sequence (1. 104) overlaps with the end of sequence Z66521.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Current sequence finishing criteria for the C. elegans genome sequencing consortium are that all bases are either sequenced unambiguously on both strands, or on a single strand with both a dye primer and dye terminator reaction, from distinct subclones. Exceptions are indicated by an explicit note IMPORPANT: This sequence is NOT necessarily the entire insert of the specified clone. It may be shorter because we only sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         available information
